Ms. Meghan Fay Zahniser
Executive Director
Association for the Advancement of Sustainability in Higher Education
2401 Walnut Street Suite 102
Philadelphia, PA 19103

Dear Ms. Zahniser,

On behalf of Susquehanna University, I am pleased to submit our latest STARS report. I affirm that the information contained within is accurate to the best of my knowledge.

Susquehanna is proud of its historic and ongoing commitment to sustainability. Susquehanna's liberal arts education aligns theory and practice to provide our students the tools they need to create a vibrant and sustainable future. Our campus garden and apiary, Freshwater Research Institute, Terracycle program, and 3 MW solar array showcase how Susquehanna is using our campus as a living learning laboratory. We're proud that sustainability is a rich part of our curriculum. We've recently launched a sustainability management course in our Sigmund Weis School of Business, while over 60 other courses in 12 academic departments integrate sustainability across the curriculum.

Our commitment to sustainability continues to deepen as we look to the future with our newest strategic plan, Susquehanna 2026, which specifically identifies sustainability as a crucial pillar. The Office of Sustainability was established in 2018 just prior to our first STARS submission and has since fostered a culture of sustainability on campus that constantly pushes us to examine and improve our policies and practices. We're thrilled that these efforts, among others, have resulted in Susquehanna submitting this report that will recognize us as a STARS silver institution.

We are thankful for AASHE's leadership encouraging institutions of higher education to examine sustainability in meaningful ways for both student development and a greener future.

Yours ever,

Jonathan D. Green
President
